

## PRESS RELEASE

La Ciotat, February 21th 2008

### **Newsteo launches its new monitoring software with RF MONITOR PREMIUM database.**

Users of Newsteo products can now take advantage of this new feature strongly requested for all "live" and "post-processing" monitoring applications: a database, with advanced sorting and research functions. It has been added to the existing supervision software RF MONITOR and all measures, transmitted by wireless products, are now stored in the new database.

The Newsteo data-loggers, allowing the transmission of wireless data from different kinds of sensors (temperature, humidity, 0-10 V or 4 / 20 mA sensors ...), still send in real-time or delayed time their measures to a PC equipped with the RF Monitor Premium software. On the same PC, users of Newsteo solutions can now take advantage of a powerful seamless database allowing them:

- To visualize on the same screen the data of all their loggers
- To sort the data by date / type of sensor / value of the measures / alarms...
- To generate automatic graphs
- To print charts, summaries of warnings, curves...
- ...

This database is already available in its PREMIUM version tailed for single-machine installations, and forthcoming GOLD version for larger installations with multiple remote access (LAN or Web) monitoring. It will also soon be labelled 21 CFR part 11, standard of the American *Food and Drug Administration*, often required in the pharmaceutical market.

The upgrade towards PREMIUM version will be freely offered to all existing Newsteo customers, and, from now, will also be included in all versions of Newsteo evaluation kits (Logger, Tracker, Builder, Token...).

#### About Newsteo:

Founded in 2005, Newsteo is an innovative company based in the south of France.

Newsteo designs, develops and commercializes a wide range of patented products and associated services, in several wireless domains: bone conduction vocal communication, telemetry and traceability.

Newsteo won in 2005 and 2006 of the National contest for Companies in innovative technologies fields (organised by the French Ministry of Research), and is supported by Oseo. The Crédit Agricole bank, through its venture capital company Sofipaca, has also invested in the company in 2007.
