

Wireless Loggers for the Monitoring of the Storage and Transport Conditions of Goods

The **Newsteo** (France) Tracker makes it possible to measure and record the temperature, moisture, light and shocks (on 3 axes), free fall and its height, which undergoes goods during its transport. These data are recorded, with several months of total autonomy, by Newsteo Tracker. On arrival of the goods, the recipient can immediately know, by radio and without unwrapping his goods, if it has been transported under conditions in conformity with its requirements. A PDF protected file is automatically generated with recorded periodic and alerts values (by column and graphs). Owners and conveyors of perishable or fragile goods are the first interested ones by this very useful product.

The Newsteo Logger makes it possible to supervise temperature and moisture of a medium. It is of permanent wireless connection to a supervision PC (by radio transmission). Every measure going beyond the preset temperature or moisture thresholds alerts the remote supervisor PC in real time. All the professionals, having to store goods under specific conditions of temperature and moisture, are attracted by this very efficient product (storage of cooled or frozen food, medical stocks...).

Thanks to these innovative wireless solutions, positioned at aggressive prices, Newsteo hopes to quickly take a lead in the market of the traceability, together with the professionals anxious to supervise their goods.
