

CO2 display

Measuring indoor air quality

MEASURING CO2, TEMPERATURE AND RELATIVE HUMIDITY IN THE AIR

The CO2 display measures the CO2 concentration in a room, as well as the temperature and humidity. It is mainly used for the prevention of COVID-19 transmission.

The operation of the CO2 display is simple and easy to learn. The display changes colour if the CO2 level is too high, from green to yellow to red. An audible alarm can also be set.

THE ADVANTAGES

 **Optimised quality/price ratio**

 **Configurable**
Set the thresholds, brightness, alarm, language, etc.

 **Easy to use**
Start up with a simple press on START

 **Touch screen**
Small, discreet and stylish

 **Fight against COVID-19**
Measure the CO2 level to limit the risk of COVID-19 transmission

TECHNICAL CHARACTERISTICS

CO2	
Measurement Range	0 to 9999 ppm
Sensor Type	NDIR
Accuracy	±75 ppm or ±5% of the value (the upper value applies)
Temperature	
Measurement Range	-10 ... +50 °C
Accuracy	±1 °C
Relative humidity	
Measurement Range	20 ... 95 % RH
Accuracy	±5 % RH
Display	3.5" LCD touchscreen
Power supply	5V, mini-USB (no internal battery)
IP Rating	IP21
Dimensions	96 x 86 x 32,5 mm
